

Later...

I... I cant say it...
I dont want to say it...
I-If I say it...
It will be real.

I'm sorry, Leona.
We knew the risks...
But knowing doesn't
make it any
easier now.

I know it hurts...
but please, tell me
what happened?

I... I-It...
It... Small...
Smaller.

It got
smaller?

*Hmm... I see. Your
testicles shrinking
a bit doesn't mean
the world's ending.
And sure, your
complexion's
changed a little
but that's nothing
to panic about.*

**THEY'RE GONE!
THEY DIDN'T
SHRINK THEY'RE
JUST GONE!**

**T-They're gone?
T-That cant be...?
That was not...**

THEY ARE!
THEY'RE JUST...
THERE'S NOTHING
THERE ANYMORE!

T-Then why
did you say
shrunk?
That's not
possible...

B-BECAUSE
IT DID!

Leona. It's alright.
Everything's
going to be okay.

I was
meticulous.
I'm certain
I measured
everything
perfectly.

It wont be...

Let me
take a look
Leona. It may not
be as bad as
you think.

Leona.
Dont be shy.
I am trying
to help you.
Show me.

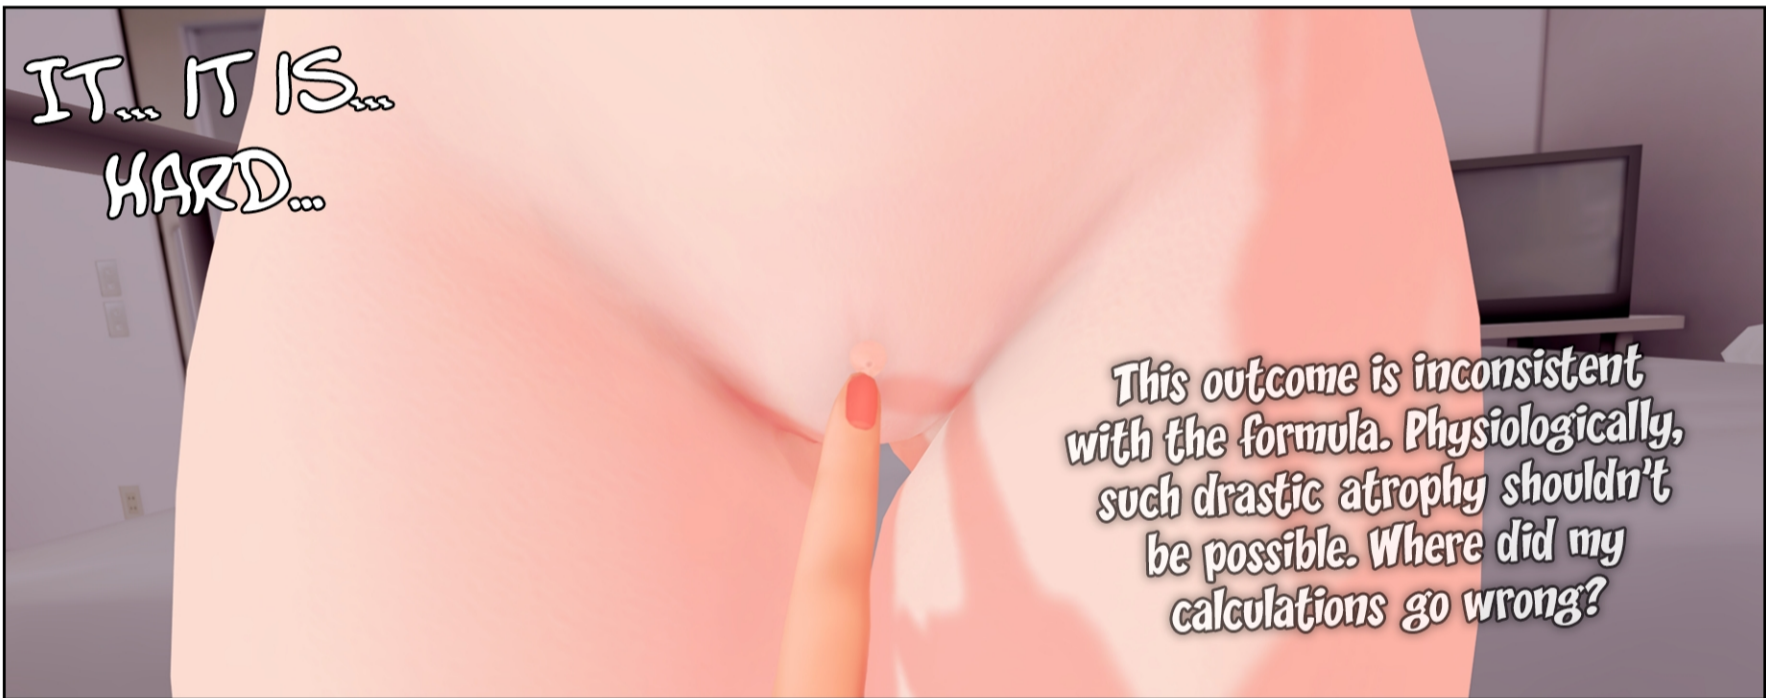

Wait... what?
It's... it's shrunk to
just a centimeter?!
...the foreskin alone
measures about 0.5
centimeters.

Smaller than the length of my nail...

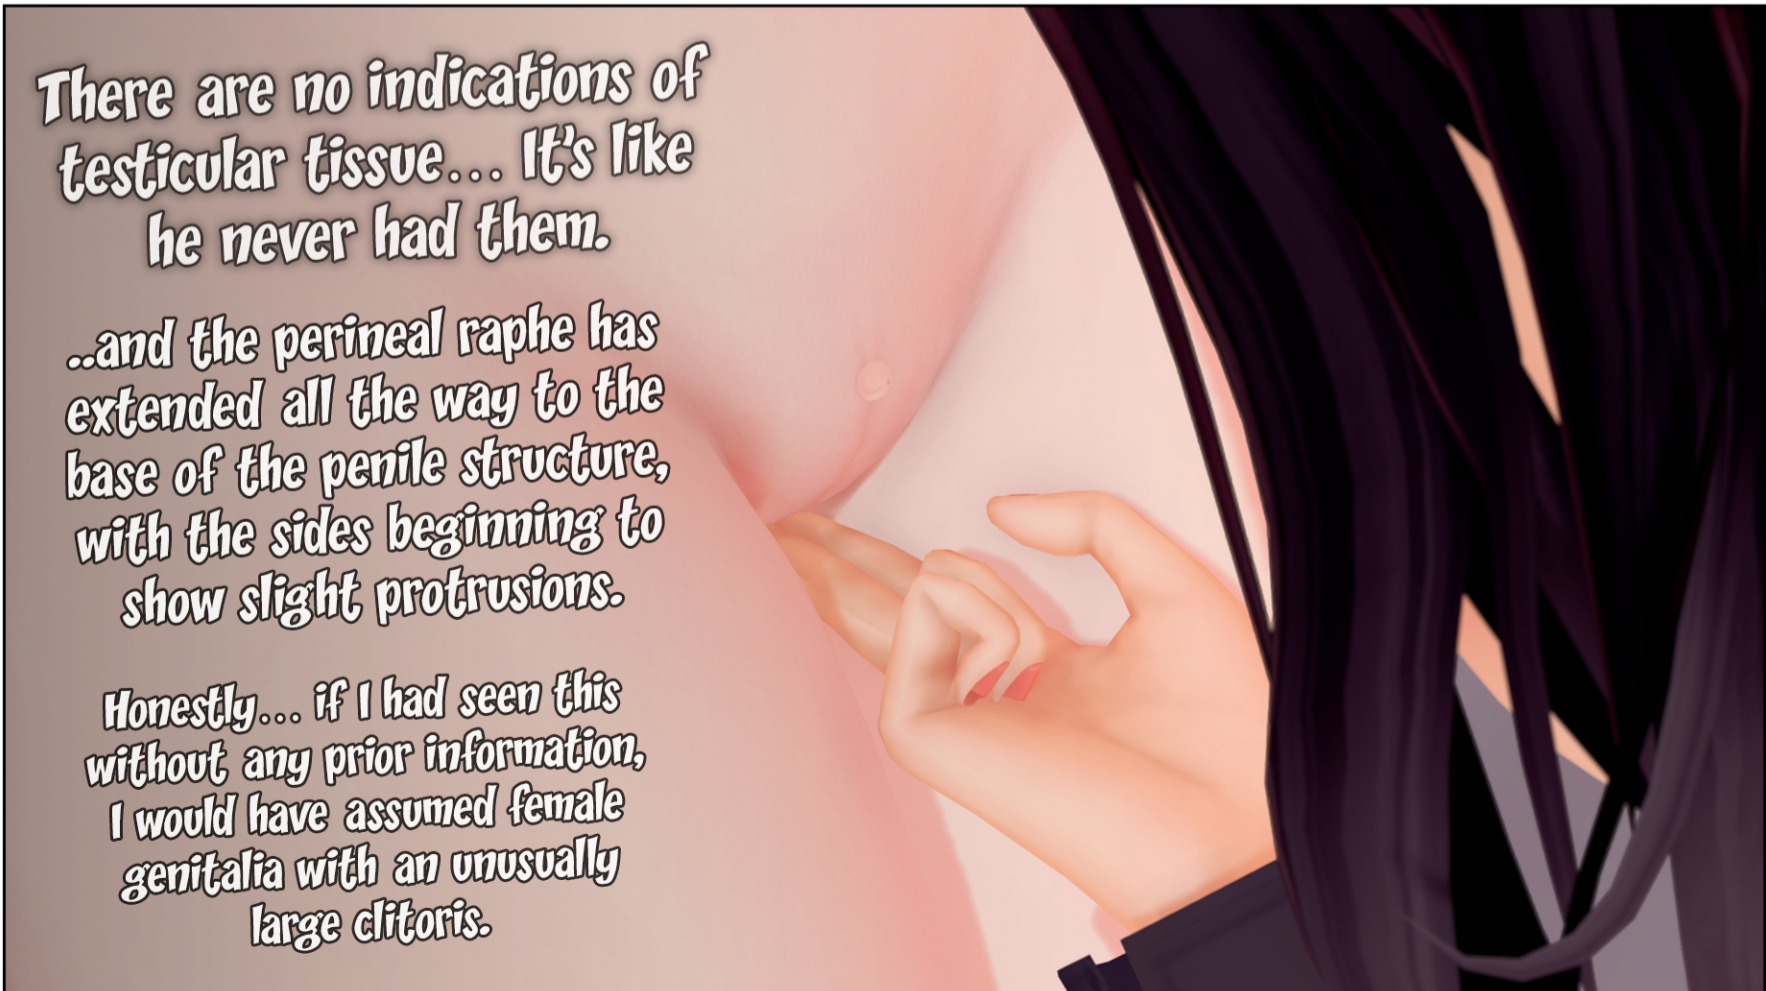

Can it still get hard?

IT... IT IS...
HARD...

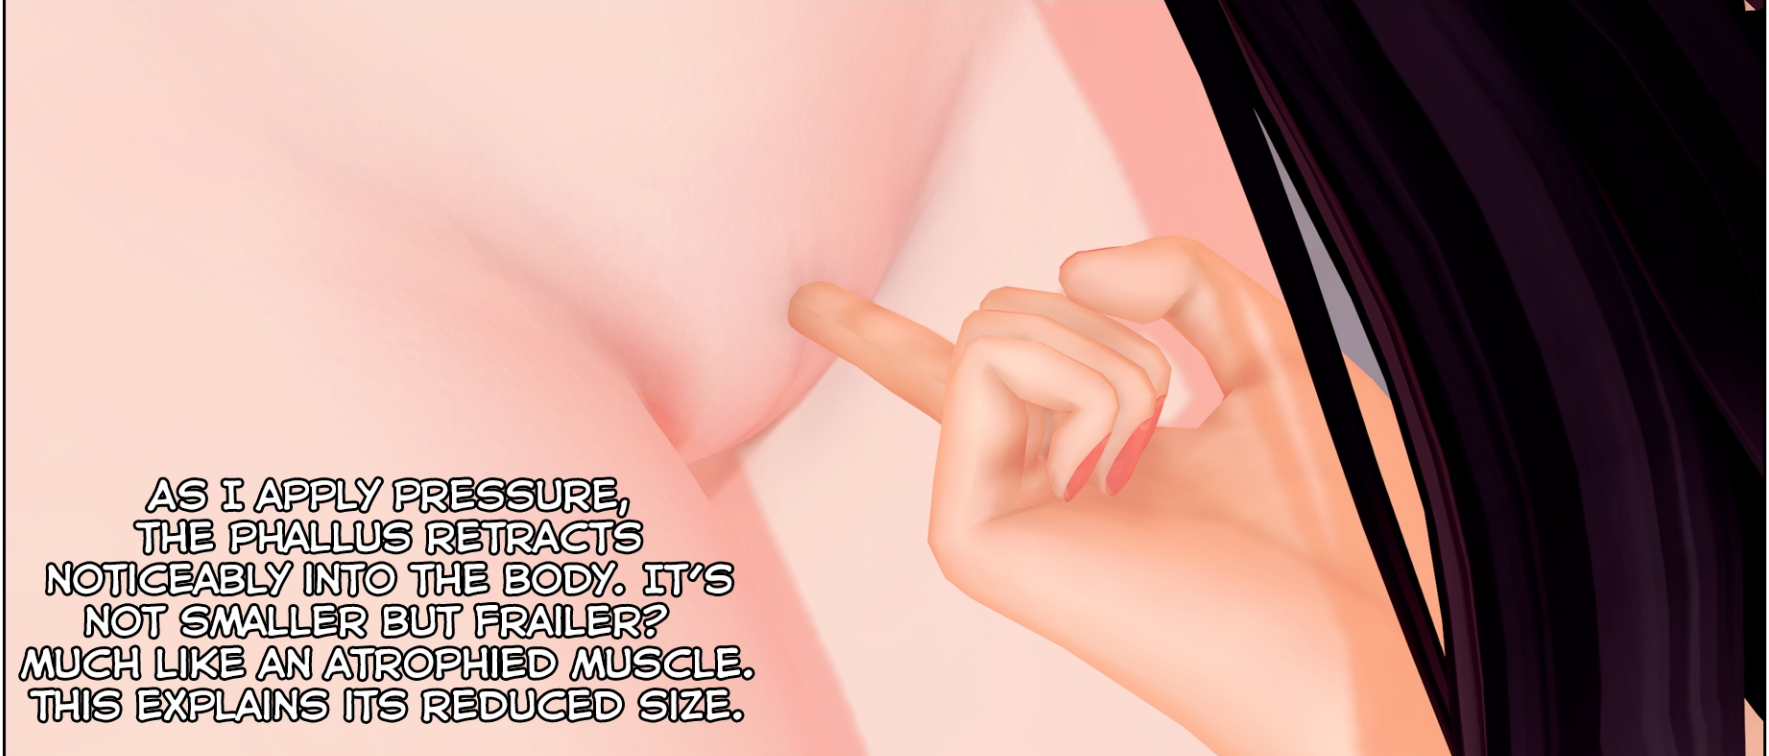

This outcome is inconsistent with the formula. Physiologically, such drastic atrophy shouldn't be possible. Where did my calculations go wrong?

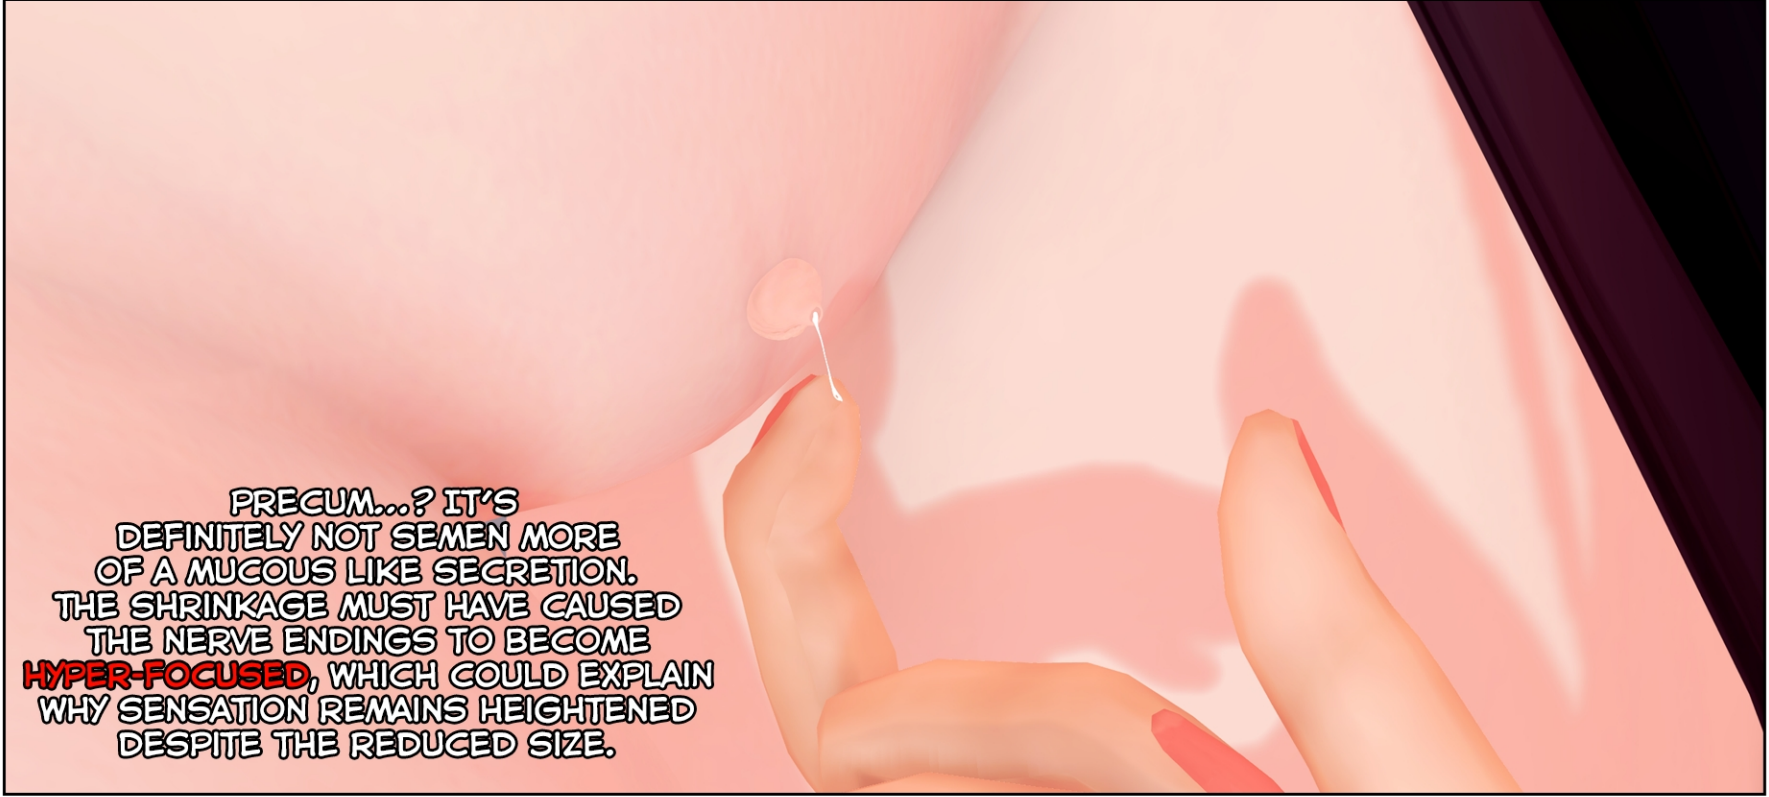

There are no indications of testicular tissue... It's like he never had them.

..and the perineal raphe has extended all the way to the base of the penile structure, with the sides beginning to show slight protrusions.

Honestly... if I had seen this without any prior information, I would have assumed female genitalia with an unusually large clitoris.

AS I APPLY PRESSURE,
THE PHALLUS RETRACTS
NOTICEABLY INTO THE BODY. IT'S
NOT SMALLER BUT FRAILER?
MUCH LIKE AN ATROPHIED MUSCLE.
THIS EXPLAINS ITS REDUCED SIZE.

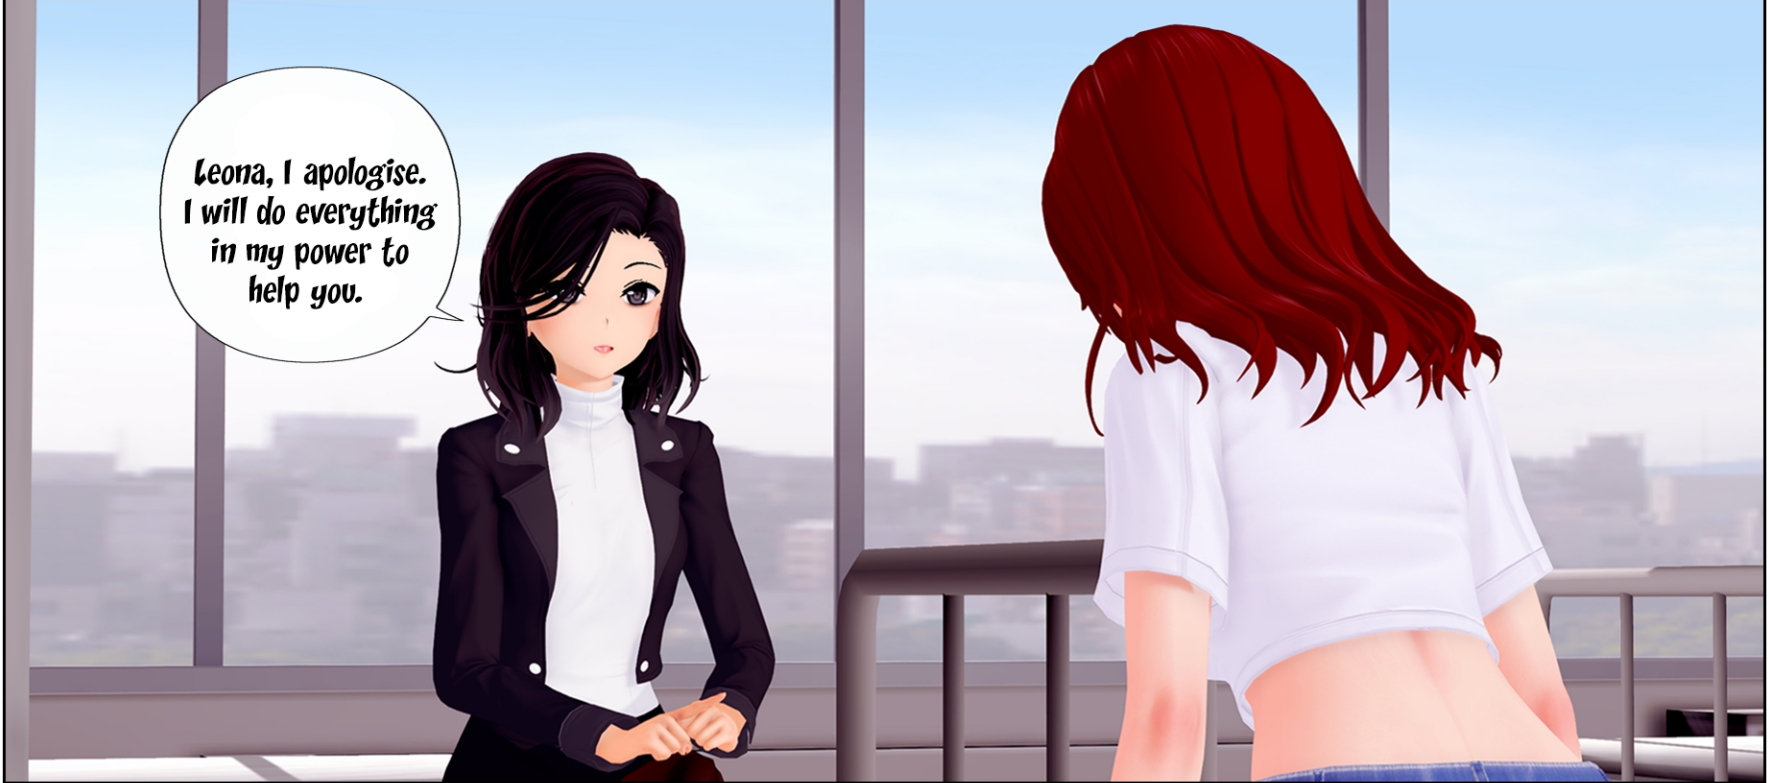

PRECUM...? IT'S
DEFINITELY NOT SEMEN MORE
OF A MUCOUS LIKE SECRETION.
THE SHRINKAGE MUST HAVE CAUSED
THE NERVE ENDINGS TO BECOME
HYPER-FOCUSED, WHICH COULD EXPLAIN
WHY SENSATION REMAINS HEIGHTENED
DESPITE THE REDUCED SIZE.

Hmm... I'll have to
measure carefully. But it seems
the remaining testicle might
have turned into an ovary.
But how is that possible? The
formula shouldn't cause this.
Was there some external
influence involved?

Ah... The formula
requires sexual functions
to remain inactive during
treatment. If one were
to masturbate, it could
theoretically counteract
or reverse the effects.

*Leona, I apologise.
I will do everything
in my power to
help you.*

*However, Leona, I
need you to be completely
honest with me have you
masturbated since
the treatment?*

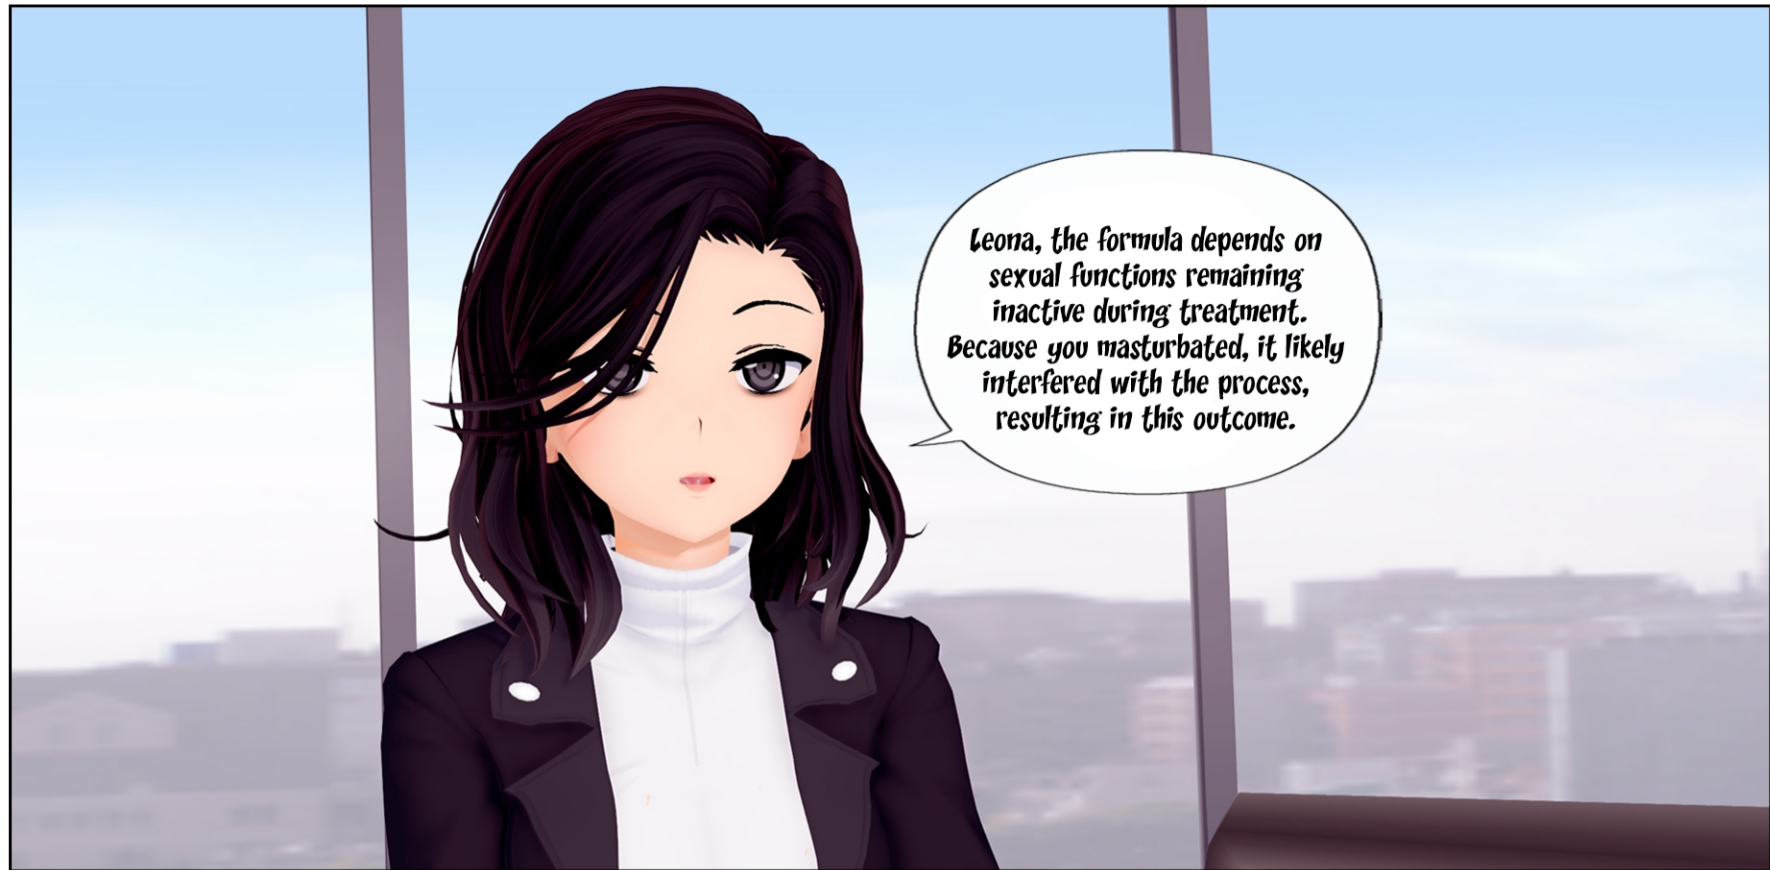

HUH, I...

*A-A FEW HOURS AGO
I WOKE UP ALONE
AND... HAD A SHOWER...
WHERE I... Y-YEAH...*

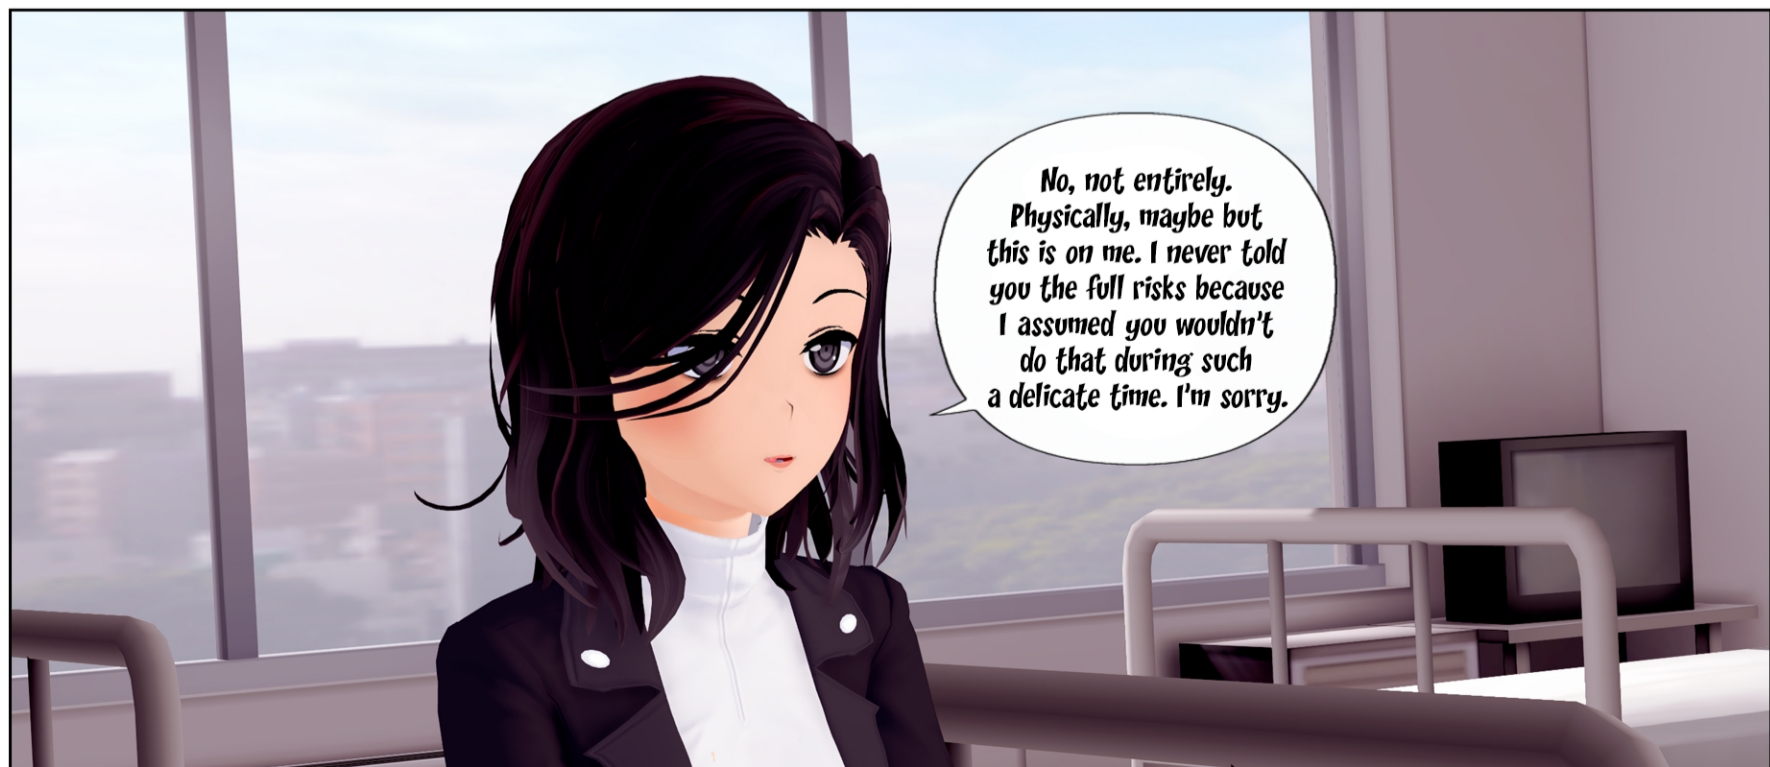

*So you did
masturbate. That
explains the outcome
to some degree.*

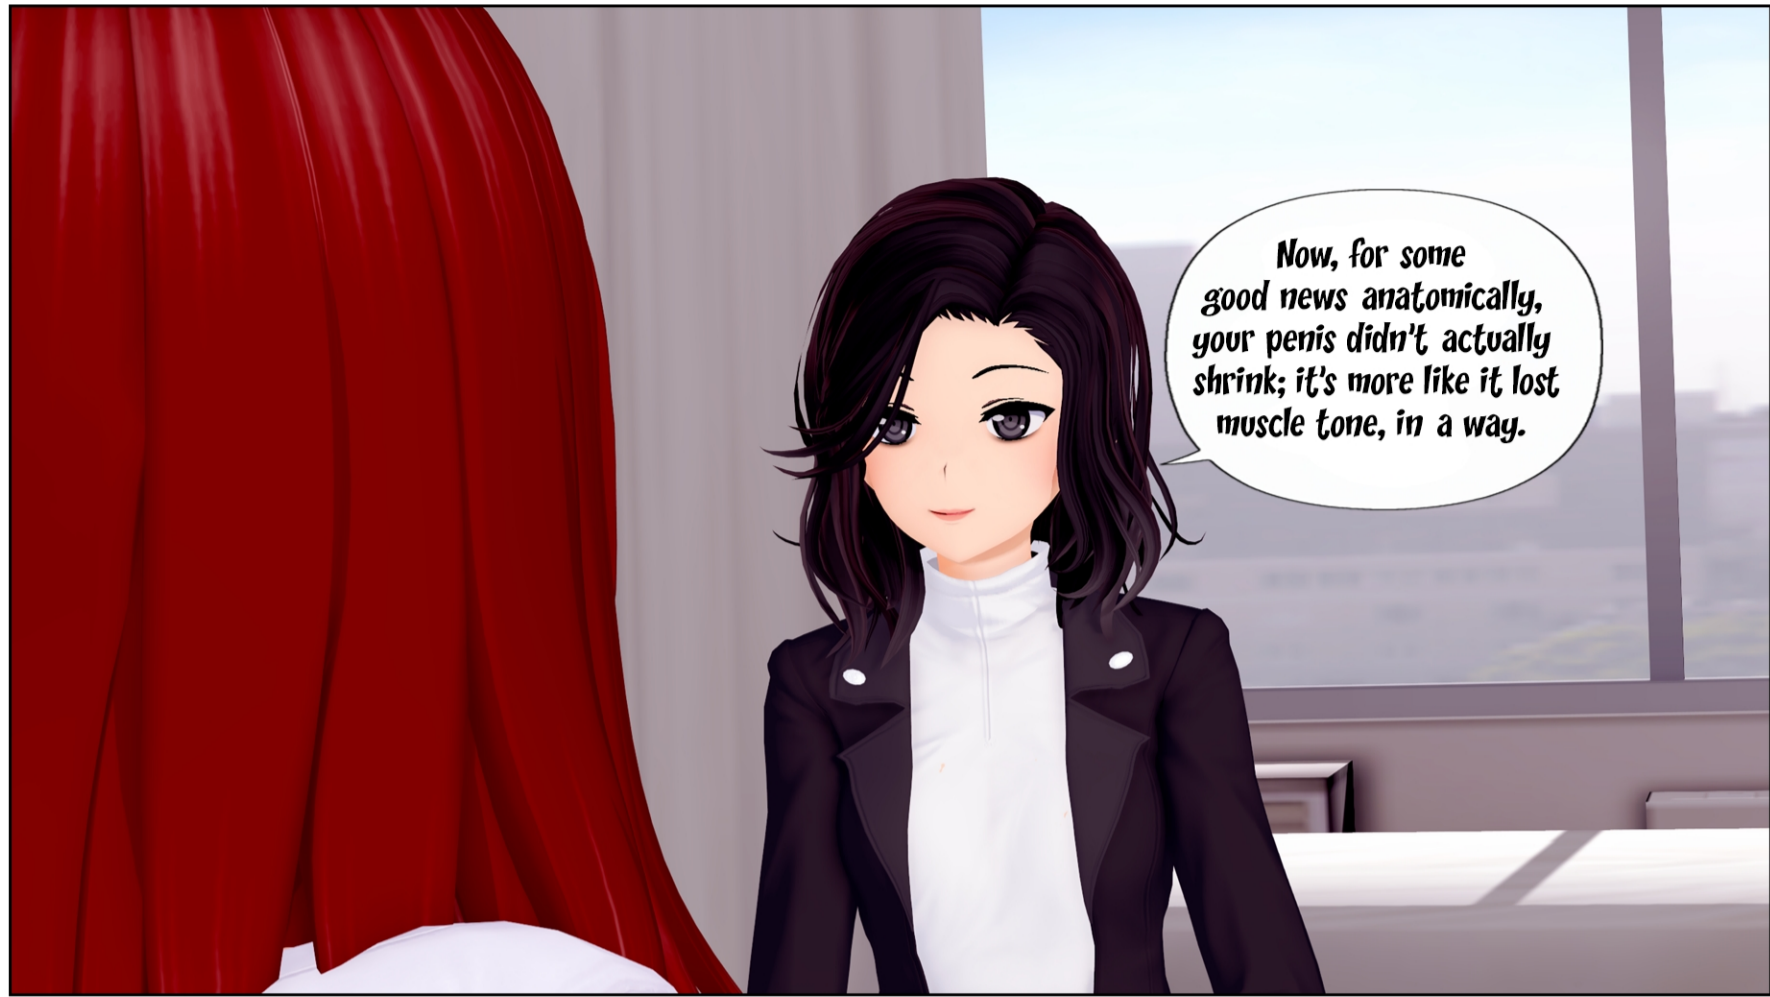

Leona, the formula depends on sexual functions remaining inactive during treatment. Because you masturbated, it likely interfered with the process, resulting in this outcome.

T-THIS IS MY FAULT...?

No, not entirely. Physically, maybe but this is on me. I never told you the full risks because I assumed you wouldn't do that during such a delicate time. I'm sorry.

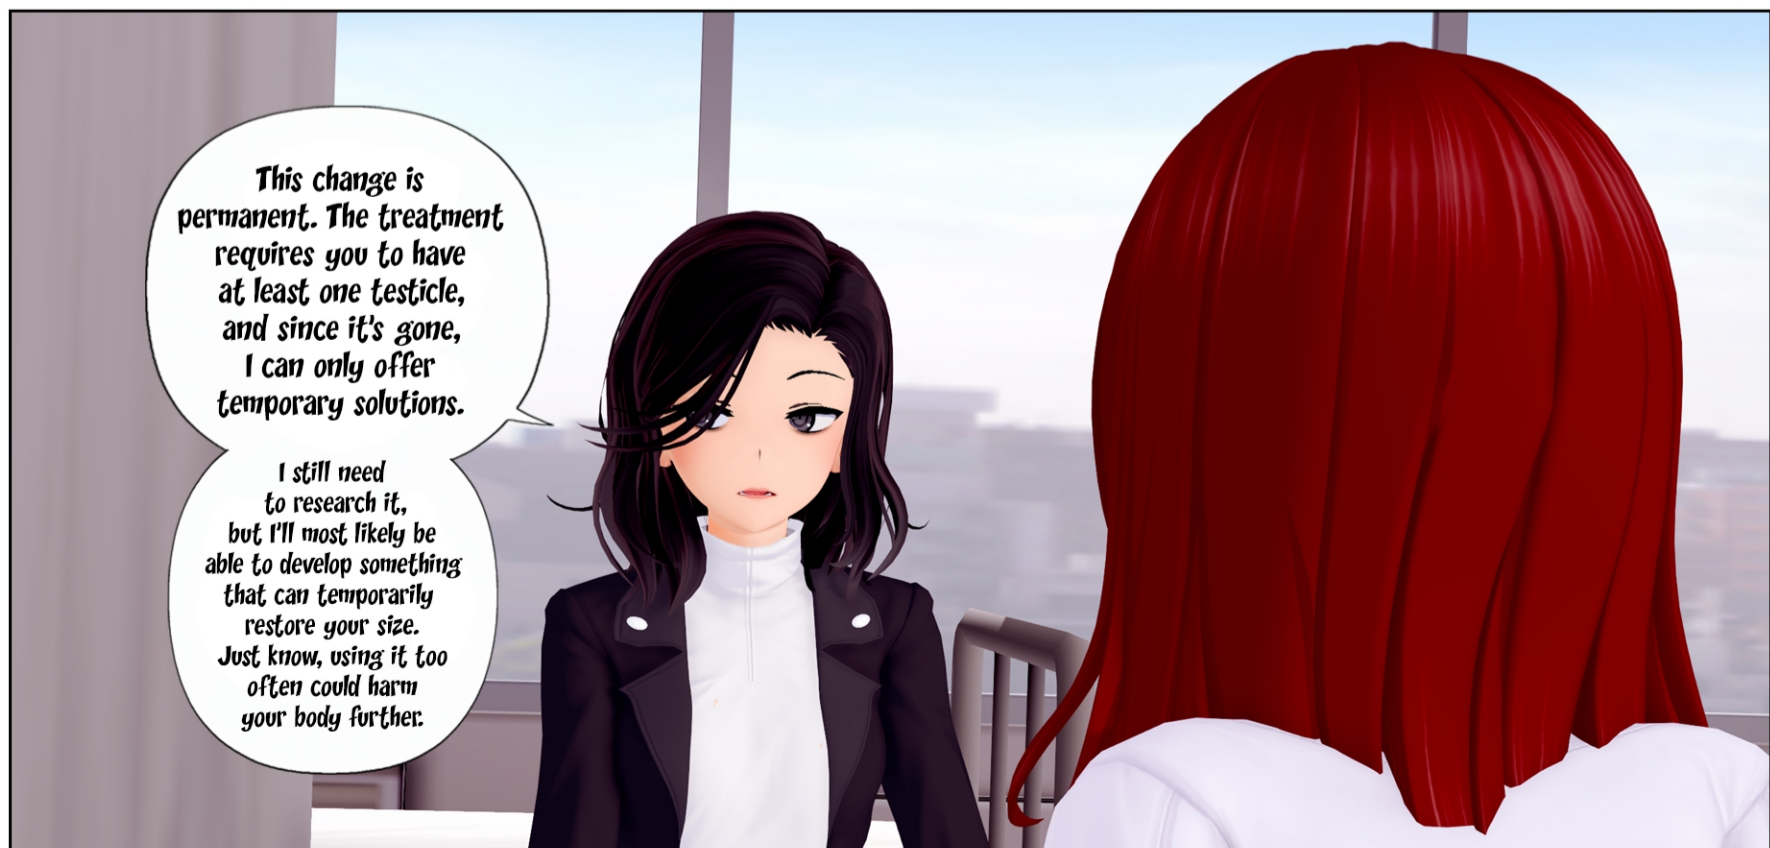

Now, for some good news anatomically, your penis didn't actually shrink; it's more like it lost muscle tone, in a way.

Then... it can get bigger?!

Not exactly.

This change is permanent. The treatment requires you to have at least one testicle, and since it's gone, I can only offer temporary solutions.

I still need to research it, but I'll most likely be able to develop something that can temporarily restore your size. Just know, using it too often could harm your body further.
